ABOUT ME

Full-stack Developer with a strong focus on frontend development using React, Next.js, and TypeScript. Skilled in translating requirements into user flows, database schemas, and functional web applications. Currently exploring AI and its practical integration into software development.

PROJECT

Check PD – Ongoing (Internship – Software Developer at Bon8)

2026–PRESENT

Tech Stack: React | TypeScript | LINE LIFF | Web APIs

A mobile-first web application for Parkinson's risk screening through guided digital assessments, progress tracking, and health recommendations.

- Developed five assessment modules using audio recording, motion sensors, and touch interactions.
- Translated requirements and provided designs into responsive registration, settings, assessment, history, and result flows.
- Built reusable mobile components, swipe navigation, animations, persistent forms, and automated frontend tests.
- Planned next phase includes backend development and machine learning-based sensor data analysis to support Parkinson's risk screening.

Gen-H: Let's Move (Internship – Software Developer at Bon8)

2026–PRESENT

Tech Stack: Next.js | React | Prisma ORM | PostgreSQL/MySQL | LINE LIFF

A gamified web application designed to encourage healthy and sustainable habits through daily quests, progress tracking, badges, and competitive leaderboards.

- Developed quest, badge, notification, Hall of Fame, and XP-based leaderboard features.
- Implemented server-side business logic, database schemas, seeding, progress tracking, and image-based quest submissions.
- Integrated LINE LIFF registration and session flows while building responsive, reusable frontend components.

NashGUI (Internship – Software Engineer at Narit)

2025–2026

Tech Stack: React | FastAPI | MariaDB | Docker

A web-based application developed to manage and generate command sets for controlling radio telescope equipment. The system supports script generation and template management to streamline telescope operation workflows.

- Built responsive UI components using React and TailwindCSS based on Figma designs.
- Integrated FastAPI REST endpoints with authentication handling.
- Structured frontend data flow and state management
- Containerized web-application services using Docker for consistent deployment environments

TECHNICAL SKILLS

Languages	Frontend	Backend	Database	Tools	AI Tools
• JavaScript • PHP • Python	• React • NextJS • Vue • TailwindCSS	• Next.js • API Routes • FastAPI • RESTful API	• MySQL • PostgreSQL	• Git • Docker	• ChatGPT • Claude • Codex • Cowork

EDUCATION

UNIVERSITY OF PHAYAO

2023–2026

Software Engineering

GPA : 3.46
